Introduction

Digitalization is a concept that encompasses the implementation of digital technologies and brings about significant changes in the community. It offers intriguing possibilities and has the potential to reshape the future. Despite its promising prospects, studies indicate that numerous businesses are struggling with the process of digital transformation. This raises questions about the attractiveness of digitalization in the retail market, as exemplified by companies like Amazon and Netflix.

The socio-technical system has a profound impact on the economy and various sectors within the community, including law, ethics, job protection, and ecology. Given the complexity of this task, it becomes crucial to structure the field of action for digitalization. To facilitate this, we employ a framework that comprises three key areas of action:

a. Goods and services: This pertains to the production and distribution of goods and services in the digital era. It explores how digitalization affects the primary, secondary, and service sectors of society.

b. Value creation: This aspect focuses on how digitalization influences the creation and delivery of value to customers. It examines the consequences for different sectors in terms of generating and capturing value.

c. Trade and commerce models: This area delves into the transformation of trade and commerce due to digitalization. It assesses the effects and implications on the primary, secondary, and service sectors, exploring new business models and market dynamics.
By analyzing each sector within this framework, we can better understand the effects and consequences of digitalization on various aspects of society, enabling us to navigate the challenges and opportunities that arise in the process.

KEY TERMS

By clarifying these key terms, we aim to establish a common understanding and framework for discussing the subject of digitalization. This ensures that readers have a solid theoretical and practical foundation to comprehend the implications and impacts of digitalization in various contexts.
